THE IDENTITY

Connected health. One clear identity.

A rounded f and an open loop connect the brand initial with daily continuity.
One shared identity for the smartwatch product, web app, mobile app and marketing site.

PRIMARY HORIZONTAL LOCKUP

STANDALONE SYMBOL

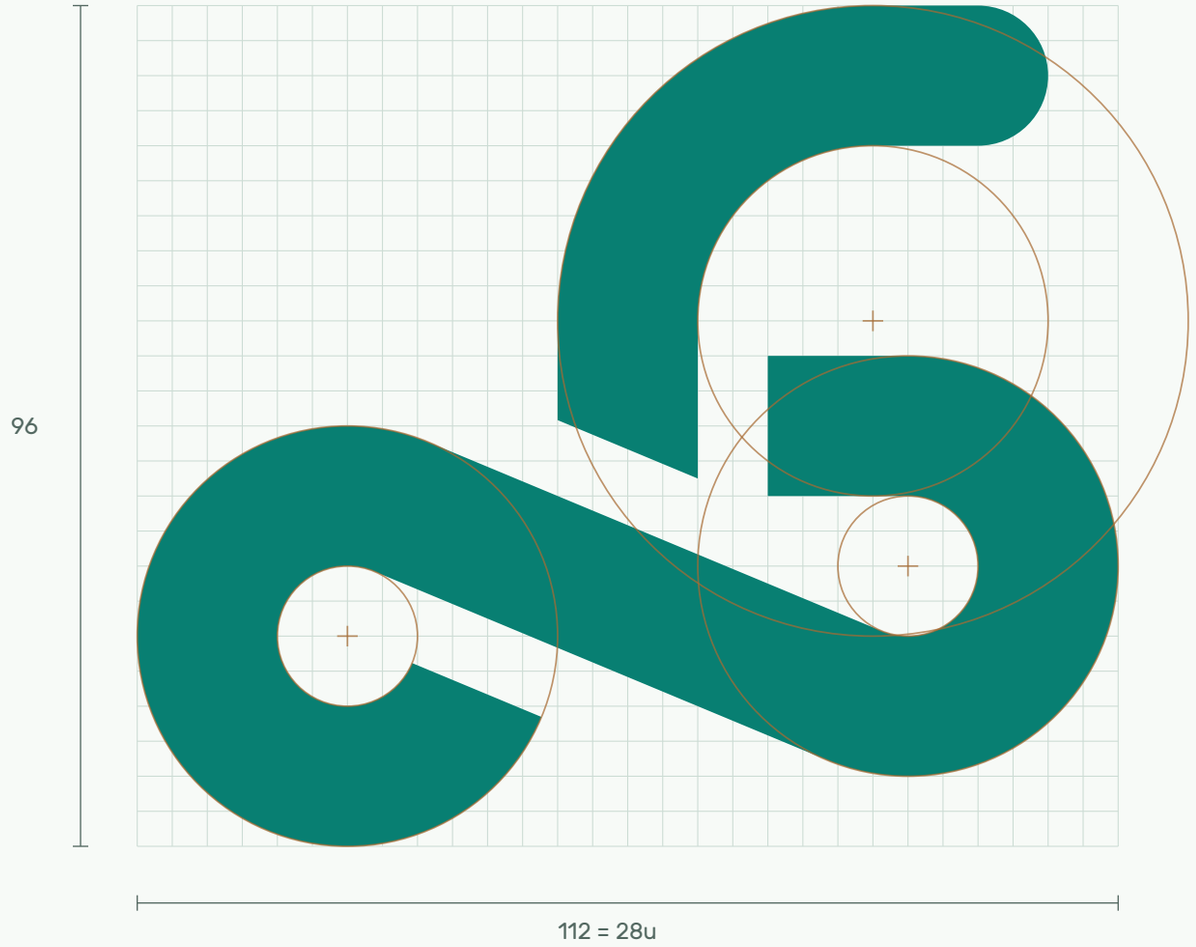
REVERSED LOCKUP

App tile
Opaque square source.
Corners follow the UI.

SYMBOL CONSTRUCTION

Geometry that can be rebuilt.

u = 4 units. Symbol = 28u x 24u. Main band = 4u.



Band thickness	**16 / 4u**
Loop radii	**R24 outer / R8 inner**
Loop centreline	**R16 / 4u**
Upper hook radii	**R36 outer / R20 inner**
Upper terminal	**R8 semicircle**
Internal clear gaps	**8 / 2u**
Diagonal tangent	**22.62 degrees**

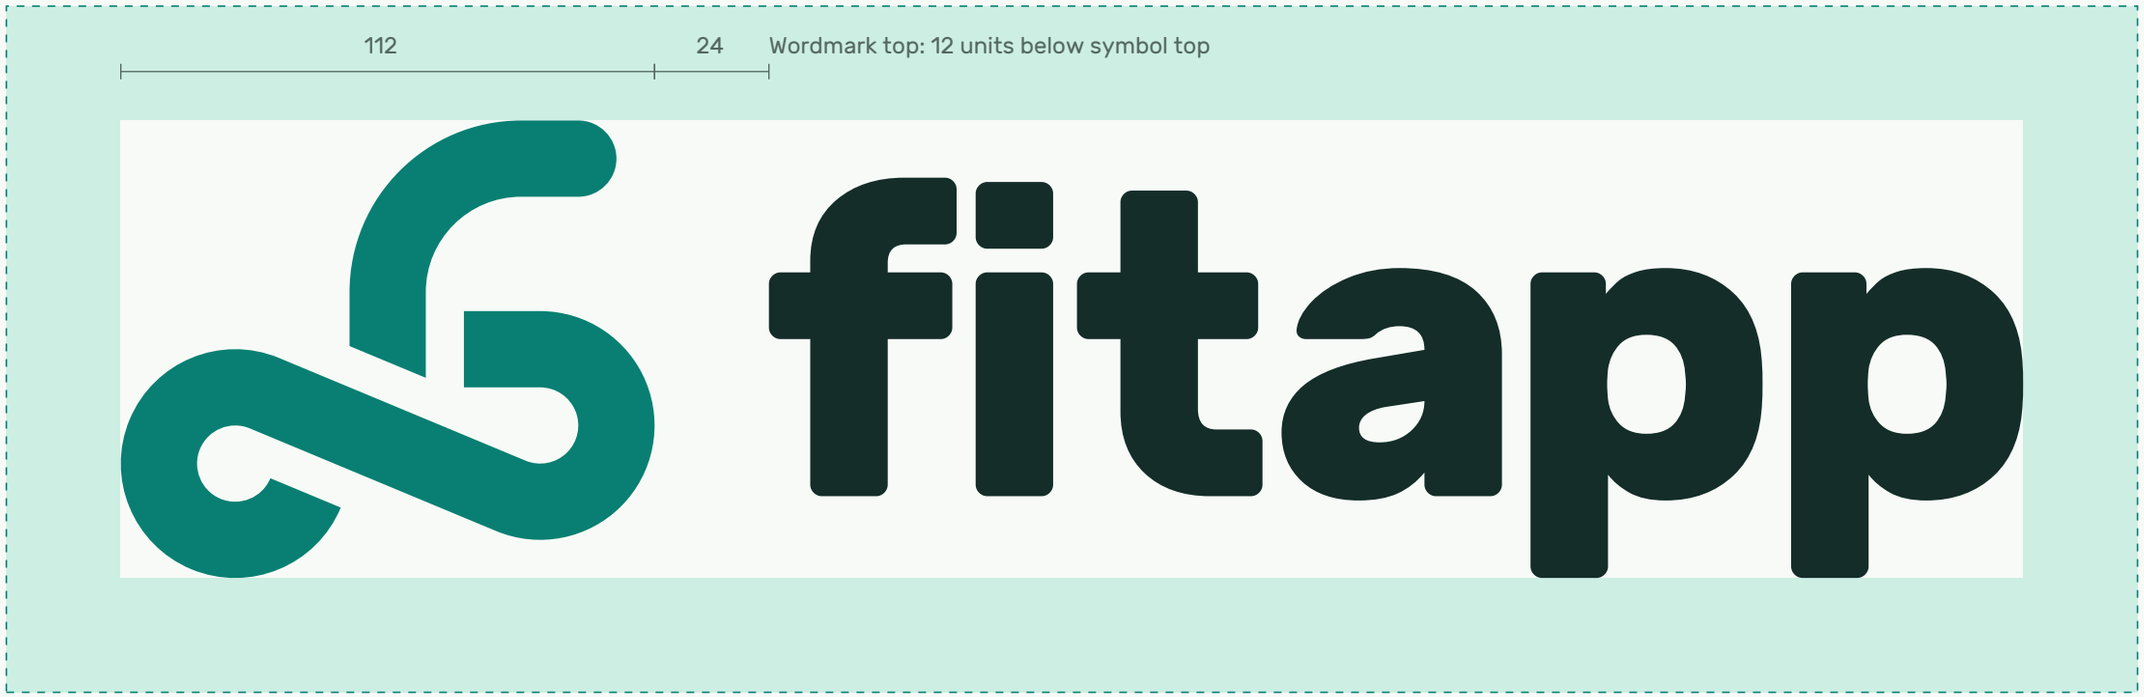
The loop uses two circles joined by their exact internal tangent. Its direction follows a 5:12:13 triangle. The hook terminal cut runs parallel to that tangent with an 8-unit perpendicular gap.

Construction lines describe the actual artwork. Production files contain filled paths only.

LOCKUP RULES

Space, alignment and readable sizes.

Preserve a 24-unit exclusion zone around the visible artwork.



A consistent lockup

Overall bounds: 399.18 x 96 units. Wordmark height: 84 units.

Rubik Bold, converted to outlines; visible glyph gaps: 4 / 5 / 4 / 6 / 6.

Spacing is adjusted optically. Keep the supplied outlines and proportions.

Recommended digital minimums

Symbol: 24 px wide. Horizontal lockup: 128 px wide.

A 16 px favicon is supplied for restricted browser contexts.

Use the symbol alone where the full name becomes too small.

Actual pixel checks and exports: 16 / 24 / 32 / 48 / 64 px symbols; 128 px lockup.

COLOR AND USE

A compact, practical color system.

The identity works in two colors, solid black, or solid white.

Evergreen

#087F72

Primary symbol

Deep ink

#142D29

Wordmark / dark ground

Soft mint

#CDEEE3

Supporting surfaces

Paper

#F7FAF7

Light ground

Use consistently

Scale uniformly. Preserve spacing and clear space. Use the provided monochrome versions when needed.
Use a plain, high-contrast background. Keep the mark free of gradients, shadows, outlines and extra symbols.

RGB / HEX masters for digital use. Print color matching should be proofed for the chosen production process.
